A.I Fundamentals

Module 6 Study Guide

Future of AI in Finance

This guide covers every lesson of the module, using only words and figures from the lessons themselves. Work through it after watching the lessons, then use the checklist at the end to test yourself.

Lesson 1: What's Coming Next

In this lesson: Agentic AI capabilities; Real-time personalization; Regulation & data privacy; Pr

Key points

- Agentic AI automates multi-step savings and expense workflows
- Personalization adjusts daily budgets using live cash flow patterns
- Central bank regulations safeguard data privacy and system transparency

Examples from the lesson

- Fundamentals, Module 6: Future of AI in Finance, Lesson 1: What’s Coming Next.
- Today, we’re going to assess three major emerging trends: agentic AI, real-time personalization, and AI regulation.
- Imagine a household that earns TT$ 8,000 in monthly income and incurs TT$ 5,500 in fixed expenses, leaving a starting baseline surplus of TT$ 2,500.
- By scanning your weekly maxi taxi fares, market purchases, and utility usage, the agent automatically identifies TT$ 300 in recurring waste.
- It then automatically redirects that TT$ 300 straight into a high-yield credit union savings account without requiring manual intervention.
- At the same time, the agent flags an upcoming TT$ 200 seasonal price increase for fete tickets and groceries, adjusting your flexible budget dynamically.
- Subtracting that TT$ 200 expense adjustment from your newly optimized surplus creates a final net monthly surplus of TT$ 2,600.
- In our next lesson, Lesson 2: Skills and Careers in an AI Economy, we will look at how these technical shifts are reshaping the Trinidad and Tobago job market and what skills you need to stay competitive.

Lesson 2: Skills and Careers in an AI Economy

In this lesson: Identify enduring human skills; Explore a TT$ worked example; Choose one upsk

Key points

- Identify enduring human skills that AI cannot replace
- Apply data literacy to a TT$30,000 inventory decision
- Commit to a daily micro-learning habit or local workshop
- Set a SMART goal to track your upskilling progress

Examples from the lesson

- This is the course “A.I Fundamentals”, Module 6 “Future of AI in Finance”, Lesson 2: “Skills and Careers in an AI Economy”.
- Our lesson objective is two-fold: first, to identify the human skills that stay valuable when AI handles routine tasks, and second, to plan one practical upskilling step that you can start today, right here in Trinidad and Tobago.
- The tool suggests ordering 200 units of festive shirts at TT$150 each, which totals TT$30,000.
- A practical upskilling step you can take right now is to enroll in a free introductory AI course offered by the University of the West Indies Open Campus or platforms like Coursera, dedicating just thirty minutes each day to watch a video, complete a quiz, or try a simple AI-powered spreadsheet tool.
- So let's recap: we identified critical human skills—emotional intelligence, situational awareness, data literacy, ethical judgment, and adaptability—that AI cannot replace; we examined a TT$30,000 inventory decision as a concrete example of data literacy in action; we proposed a daily micro-learning habit and local community engagement as practical upskilling steps; and we encouraged you to set a SMART goal to track your development.
- In the next lesson, Lesson 3: “Your Responsible AI Action Plan”, we will build on this foundation to create a personal checklist for using AI ethically and effectively in your financial work.

Lesson 3: Your Responsible AI Action Plan

In this lesson: Identify need; Verify privacy; Pilot with low risk; Review & adjust.

Key points

Examples from the lesson

- Fundamentals course, Module 6 “Future of AI in Finance,” Lesson 3: “Your Responsible AI Action Plan.”
- In Lesson 2 we explored the growing skills and careers in an AI-driven economy.
- Let’s say you have TT$10,000 saved for a short-term goal, and you want to test an AI-driven micro-investment platform.

- You decide to allocate TT$200 as a pilot investment and TT$40 for the tool's subscription and data backup.
- You pay a trial subscription of TT$30, and a data backup service of TT$10, giving a SUBTOTAL Tool Costs of TT$40.
- Then you place the Initial AI trade of TT$200, making a SUBTOTAL Pilot Investment of TT$200.
- Adding both sides gives RESULT Total Pilot Cost of TT$240.
- By following these five habits – clear goal, privacy check, low-risk pilot, ledger tracking, and monthly review – you create a responsible AI action plan that protects your TT$ and builds confidence.

Recap checklist — can you say each one?

Lesson 1: What's Coming Next

- ☐ Agentic AI automates multi-step savings and expense workflows
- ☐ Personalization adjusts daily budgets using live cash flow patterns
- ☐ Central bank regulations safeguard data privacy and system transparency

Lesson 2: Skills and Careers in an AI Economy

- ☐ Identify enduring human skills that AI cannot replace
- ☐ Apply data literacy to a TT$30,000 inventory decision
- ☐ Commit to a daily micro-learning habit or local workshop
- ☐ Set a SMART goal to track your upskilling progress

Lesson 3: Your Responsible AI Action Plan
